9. Security Awareness Checklist
10. Conclusion

1. Introduction

1.1 Purpose

- This document provides guidance for users and administrators on securely using the messaging application.
- It explains recommended security practices, authentication methods, secure communication features, privacy protections, and troubleshooting steps to help users maintain the confidentiality and integrity of their communications.

1.2 Learning Objectives

- After completing this guide, users should be able to:
 - Configure a secure account
 - Enable Multi-Factor Authentication (MFA)
 - Verify contacts using safety numbers
 - Send encrypted messages and files
 - Participate in secure voice calls
 - Recognize phishing attempts
 - Report security incidents

2. Secure Account Setup

2.1 Account Registration

- Users should:
 - Create a strong password
 - Enable MFA
 - Register a trusted device
 - Keep recovery information up to date

2.2 Password Requirements

Requirement	Recommendation
Minimum Length	12 Characters
Complexity	Uppercase, lowercase, numbers, symbols
Password Reuse	Not Allowed
Password Manager	Recommended

2.3. Secure Accounts

3. Using Secure Messaging

- Messages are automatically protected using end-to-end encryption.
 - Users should:
 - Verify recipient identity
 - Confirm safety numbers when available
 - Avoid sending sensitive information to unknown contacts
 - Update the application regularly

3.1 Message Security Features

Feature	Purpose
End-to-End Encryption	Message confidentiality
Message Authentication	Prevent tampering
Forward Secrecy	Protect previous conversations
Secure Key Rotation	Continuous protection

3.2 Secure Messaging

4. Secure Voice & File Sharing

4.1 Voice Calls

- Users should:
 - Verify recipient identity
 - Use trusted networks when possible
 - Avoid discussing sensitive information over speakerphone
 - Update the application before important calls

4.2 File Sharing

- Before sharing files:
 - Verify recipient
 - Scan files for malware
 - Avoid executable attachments
 - Share only necessary information

4.3 File Sharing Checklist

Check	Status
Recipient Verified	Yes
File Scanned	Yes
Sensitive Data Reviewed	Yes
Correct File Selected	Yes

4.4 secure File Sharing

Figure 39 – Secure File Sharing Workflow

5. Privacy Best Practices

- To maintain privacy:
 - Lock your device with a PIN or biometric authentication.
 - Never share verification codes or passwords.
 - Keep the application updated.
 - Review connected devices periodically.
 - Delete unnecessary files and conversations.
 - Log out from unused devices.

Do	Don't
Enable MFA	Share passwords
Verify contacts	Click unknown links
Lock your device	Disable updates
Use trusted networks	Install untrusted apps

5.1 Privacy Checklist

Practice	Recommended
Device Lock	Yes
Biometric Authentication	Yes
MFA Enabled	Yes
Automatic Updates	Yes
Screen Lock Timeout	Short

6. Recognizing Security Threats

Users should recognize common threats.

6.1 Phishing

- **Warning signs:**
 - Unexpected login requests
 - Urgent payment requests
 - Unknown links
 - Fake support messages

6.2 Malware

- **Indicators:**
 - Unexpected application behavior
 - Battery drain
 - Excessive network activity
 - Unauthorized permissions

6.3 Social Engineering

- **Examples:**
 - Impersonation
 - Fake customer support
 - QR code scams
 - Credential harvesting

6.4 Threat Recognition

Figure 40 – Threat Recognition Process Workflow

7.Troubleshooting Security Features

7.1 Common Issues

Issue	Resolution
MFA Code Not Working	Verify device time
Unable to Verify Contact	Refresh safety number
Login Failure	Reset password
Certificate Warning	Do not proceed; report issue
Failed Secure Call	Update application and retry

7.2 Reporting Security Incidents

- Users should report:
 - Lost devices
 - Suspicious messages
 - Unauthorized login alerts
 - Possible phishing attempts
 - Application crashes affecting security

8. Frequently Asked Questions (FAQ)

- **Q1. Are my messages encrypted?**
 - Yes. Messages are protected using end-to-end encryption, ensuring only the intended recipient can read them.
- **Q2. Can the server read my messages?**
 - No. The server routes encrypted messages and stores only the minimum metadata required for service operation.
- **Q3. Why should I enable MFA?**
 - MFA provides an additional layer of protection even if your password is compromised.
- **Q4. What should I do if I lose my phone?**
 - Immediately revoke the device, change your password, and contact the administrator if applicable.
- **Q5. Are voice calls encrypted?**
 - Yes. Voice calls are protected using secure real-time encryption.

9. Security Awareness

9.1 Daily Security Checklist

Task	Complete
Device Locked	(Yes/No)
MFA Enabled	(Yes/No)
Software Updated	(Yes/No)
Unknown Links Avoided	(Yes/No)
Sensitive Files Verified	(Yes/No)
Suspicious Activity Reported	(Yes/No)

9.2 User Security

Figure 41 – User Security Awareness Cycle

10. Conclusion

- This User Training Guide provides practical instructions for securely using the messaging application.
- By following the recommended practices for authentication, encrypted messaging, voice calls, file sharing, and privacy protection, users can significantly reduce the risk of unauthorized access, phishing, malware, and data exposure.
- Ongoing awareness and adherence to security best practices remain essential to maintaining a secure communication environment.
